Education

B.Tech in Computer Science and Engineering, College of Engineering Kalloppara 2023 – Present

- Relevant Coursework: Data Structures, Operating Systems, DBMS, Computer Networks, Algorithm Analysis and Design, Compiler Design, Object-Oriented Programming, Artificial Intelligence, Cloud Computing

Experience

Student Intern, International Centre for Free and Open Source Software (ICFOSS) Jun 8, 2026 – Jul 16, 2026

- Developed and evaluated Malayalam AI solutions using Retrieval-Augmented Generation (RAG), transformer models, multilingual embeddings, semantic search, and LLM-based document question-answering pipelines.
- Contributed to Malayalam OCR and text-processing workflows, including document extraction, preprocessing, normalization, chunking, and retrieval of Malayalam and multilingual content.
- Deployed and configured OpenWebUI within the organization to provide employees with centralized access to locally hosted large language models.
- Conducted experiments on embedding models, retrieval techniques, and local model deployment to improve the accessibility and reliability of Malayalam-language AI applications.

Developer Intern, Thinkvyne Digital Jun 2025 – Dec 2025

- Implemented responsive UI components using React and Tailwind CSS, improving usability and interface consistency.
- Integrated frontend with Laravel backend APIs, ensuring efficient data flow and performance.

Freelance Web Developer, Coxdo Solutions

- Delivered 5+ production-ready web applications using React and Tailwind CSS, improving client engagement and performance.
- Collaborated with clients to gather requirements and deliver scalable, high-performance solutions.

Projects

Karyadhyaksha – Multilingual Office Assistant RAG 2026

- Developed a multilingual, voice-first office assistant that converts employee requests into workflows for meetings, complaints, visitors, attendance, and policy queries.
- Built a RAG pipeline using FastAPI, BGE-M3 embeddings, a vector database, and locally deployed LLMs to retrieve and answer questions from internal office documents.

Digital Delivery Management System 2026

- Co-developed a real-time delivery system, reducing paper-based processes by 80% in live operations.
- Engineered a Flutter driver app with offline-first synchronization and digital proof of delivery.
- Designed a React admin dashboard managing 100+ invoices per session with CSV uploads and driver assignment.

Plant Disease Detection & Smart Spray Assistant 2026

- Built a smart agriculture system integrating Raspberry Pi, ESP32, and a React dashboard for real-time monitoring.
- Developed AI-assisted decision support using Gemma 4, converting disease labels into actionable treatment guidance.
- Implemented spray control workflow enabling farmers to track and trigger treatment actions efficiently.

Skills

- **Programming Languages:** Python, JavaScript, TypeScript, YAML
- **Frameworks & Libraries:** React, HTML, CSS, Flutter, FastAPI, Express, REST APIs
- **AI/ML:** RAG, Transformer Models, Embeddings, Vector Databases, LLMs
- **Tools:** Linux, Git, GitHub, Docker, Jira
