Education

B.Tech in Computer Science and Engineering, College of Engineering Kallooppara

2023 – Present

- Relevant Coursework: Data Structures, Operating Systems, DBMS, Computer Networks, Algorithm Analysis and Design, Compiler Design, Object-Oriented Programming, Artificial Intelligence

Experience

Freelance Web Developer, Coxdo Solutions

- Delivered 5+ production-ready web applications using React and Tailwind CSS, improving client engagement and performance.
- Collaborated with clients to gather requirements and deliver scalable, high-performance solutions.
- Optimized UI responsiveness and reduced load times across multiple projects.

Developer Intern, Thinkvyne Digital

Jun 2025 – Dec 2025

- Implemented responsive UI components using React and Tailwind CSS, improving usability and interface consistency.
- Integrated frontend with Laravel backend APIs, ensuring efficient data flow and performance.
- Collaborated with development team to deliver production-level features and bug fixes.

Projects

Digital Delivery Management System

2026

- Co-developed a real-time delivery system with a team of 2, reducing paper-based processes by 80% in live operations.
- Engineered a Flutter driver app with offline-first synchronization and digital proof of delivery.
- Designed a React admin dashboard managing 100+ invoices per session with bulk CSV uploads and driver assignment.
- Implemented GPS tracking with periodic updates, improving delivery monitoring and visibility.
- Deployed system on a physical server ensuring stable uptime and production availability.

Plant Disease Detection & Smart Spray Assistant

2026

- Built a smart agriculture system integrating Raspberry Pi, ESP32, and a React-based dashboard for real-time monitoring.
- Implemented edge-based plant disease detection pipeline and REST API to stream field events with live status updates.
- Developed AI-assisted decision support using Gemma 4, converting disease labels into actionable treatment guidance.
- Designed spray control workflow enabling farmers to track and trigger treatment actions, improving response time and crop protection efficiency.

ParkAvail – Smart Parking Solution

2024

- Collaborated in a team of 4 to build a real-time parking platform, reducing parking search time by 35%.
- Designed REST APIs using Node.js and MongoDB to handle dynamic parking and availability data.
- Integrated Firebase authentication and built responsive React interfaces for users and admins.

Skills

- **Programming Languages:** JavaScript, TypeScript, Python, Dart, Java, C/C++, SQL, YAML
- **Frameworks & Libraries:** React, React Native, Flutter, Angular, Vue.js, Express, FastAPI, Tailwind CSS
- **Tools & Platforms:** Linux, Git, GitHub, GitHub Actions, Docker, VS Code, Jira, Agile, n8n, Firebase, Supabase, MongoDB, MySQL, OpenCV, Ollama, Gemini, Claude, ChatGPT, Copilot, Raspberry Pi, Arduino, Ghost CMS, Windows, MacOS
